

INSTRUCTIONS FOR WALL MOUNT IN SINGLE GANG BOX

1.) Using a small flat head screwdriver gently pop out the bottom of the touch panel.

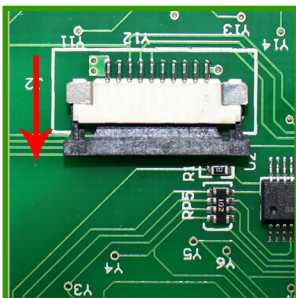

2.) Push down on both sides of the black plastic quick connector and remove the connecting wire.

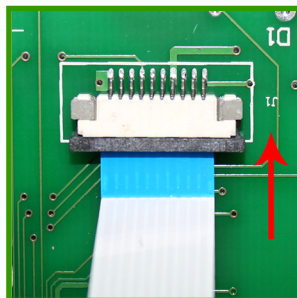

3.) Install the back side of your faceplate controller to the electrical box.

4.) Re-insert the connecting wire with the blue side facing up. See further steps for more details.

5.) Pull Down the black plastic of the quick connector.

6.) Insert the wire into the connector and pinch the black plastic closed as seen in the photo above.

7.) Once you have installed the electrical box in the wall you can then pop the faceplate cover back into place.

8.) Apply 12-24VDC Power to your faceplate controller and enjoy your new RGB LED lights.
